Summary

Software engineer focused on reliable delivery, clean architecture, and measurable product outcomes.

Experience

Senior Software Engineer **2022–Present**
CloudScale Inc. *Seattle, WA*

- Led delivery of a customer-facing analytics platform serving 40,000+ daily users, raising uptime from 98.9% to 99.95%.
- Designed REST and GraphQL APIs handling 2M+ requests per day; cut p95 latency by 45% and cloud spend by 30%.
- Mentored five engineers and introduced CI/CD with automated testing, shortening release cycles by 60%.

Software Engineer **2019–2022**
NexaTech Solutions *San Francisco, CA*

- Built full-stack features with React, Node.js, and PostgreSQL; automated deployments with Docker and AWS.
- Migrated 12 manual workflows onto automated pipelines, saving an estimated 200 engineer-hours per month.

Education

B.S. Computer Science **2015–2019**
University of Washington *Seattle, WA*
GPA 3.8/4.0

Skills

Python, Java, TypeScript, SQL, Go, React, Node.js, Django, AWS, Docker, Kubernetes, Terraform, CI/CD

Projects

StaCache — *Open-Source Developer Tool*
Python, Docker, GitHub Actions, AWS

- Designed and maintain an open-source caching tool with 1,200+ GitHub stars used by 300+ repositories.
- Reduced cold-start latency by 40% in benchmarked and production workloads.
